## **Survey Finds Sharp Increase in Availability of E-Cigarettes in Butte County**

*Just released findings from statewide survey shows disparity in availability  
Of healthy and unhealthy products*

CHICO, CA – March 8, 2017 –New research shows that in Butte County the availability of e-cigarettes has grown over 30% since 2013. These findings are part of new research released today on the availability and marketing of tobacco products, alcohol, condoms and healthy and unhealthy food options in California stores that sell tobacco.

Today, throughout California, health advocates held 13 press events to release results of the scientific survey, which is the largest its kind. It builds upon an initial research released three years ago in March 2014 and provides insights into changes in the availability and marketing of the studied products during this time. Information was collected in the summer of 2016 from more than 7,100 stores in all 58 California counties including pharmacies, supermarkets, delis, convenience and liquor stores as well as tobacco-only stores.

“Overall, the findings show a continuing and alarming discrepancy in our county in the accessibility and marketing between products that promote a healthy lifestyle, and those that don’t,” said Sherry Morgado, BCPHD Assistant Director. “Stores play a critical role on our community’s health, and this survey shows offerings and messaging are out of balance, tipping heavily toward unhealthy options. Our goal is to help re-calibrate the balance toward health.”

### **The survey found the following for Butte County:**

- In addition to selling cigarettes, 95.5% of stores sell “little cigars” or cigarillos, but only 42.9% of stores sold fresh fruits or vegetables.
- 39% of stores sold non- or low-fat milk, but nearly 84.4% sell alcohol.
- 80% of surveyed stores sell condoms, but only 60% sell them on unlocked shelves.
- E-cigarettes saw a significant increase in Butte County in stores from the last time this survey was conducted, up more than 30%.

“The expanded availability of e-cigarettes are of particular concern and reflect the spike in use by teens and young adults in the last three years,” said Ellen Michaels, BCPHD Health Education Specialist.

Another goal was to examine the accessibility and marketing of healthy and unhealthy products to youth.

“This survey found that our community’s youth are inundated with unhealthy messages and choices. We need to change what information and options our kids are exposed to and work to surround them with healthy choices and messaging instead,” said Miranda Johnson, Supervisor, BCPHD Community Health Program.

**The survey found the following for Butte County:**

- Only 13% of stores advertised healthy products on their storefronts, but 76.6% of storefronts advertised unhealthy products. 65.9% of stores near schools have storefront advertising for unhealthy products.
- More than 44.8% of stores place tobacco products or ads in kid-friendly locations, such as tobacco ads at ‘kid-level’ (three feet or below) or tobacco products near candy or toys.
- More than 51.5% of stores placed alcohol ads at “kid-level” or near kid-friendly items such as candy or toys.
- 96.1% of stores sell flavored non-cigarette tobacco products, which often have kid-appealing flavors, such as grape, watermelon, chocolate, gummy candies and even breakfast cereals. Similarly, 95.5% of stores near schools also sell flavored tobacco products.

“Butte County Public Health is committed to continuing to work with local health advocates and partners to provide accurate information and help make the healthy choice the easy choice for Californians,” stated Morgado.

*Healthy Stores for a Healthy Community* is a statewide campaign formed by tobacco prevention, nutrition, alcohol abuse prevention and STD prevention partners collaborating to improve the health of Californians by informing them about the impact of unhealthy product availability and marketing in the retail environment.
